

# HOW TO MAKE A SKULL FACE

1. Start with a nice face. Pin all hair away from nice face.

2. Next put on a nice even coat of white face makeup. Blend it out using a dabbing motion. Use a makeup sponge to get best results. Then lightly powder with baby powder using a soft puff. Don't breath the powder in.

3. With a grey or black eye liner, draw your features as shown on this model. → Follow the bone structure of the model helps to make it believable.

← This creates a coloring book type situation and you just need to start filling in the areas as shown.

Just take black face makeup and just start filling in using a small makeup or craft brush.

4. Add details like teeth. You may have to go over the white for the teeth a second time. Be sure to put a little black between lips. Also it is advisable to paint the ears black so they blend in. A little blended shading on the lines on the temples, forehead and even cheek bones helps to add dimension but be careful, not too much.

Voila! You now have a skeleton face suitable for any "dead" character you wish to create

**HAPPY HALLOWEEN!**
